

BC25 Instance Port Overview

Generated: 2026-04-17

Instance Ports

Instance	Auth	Dev	Client	SOAP	OData	Management	Status
BC250	Windows	7049	7085	7047	7048	7045	Running
BC25UserPassword	NavUserPassword	7146	7147	7148	7149	7150	Ports corrected; restart pending
BC25Test	Windows	7246	7247	7248	7249	7250	Running
BC25TestUserPwd	NavUserPassword	7346	7347	7348	7349	7350	Running

Port pattern

- x46 = DeveloperServicesPort
- x47 = ClientServicesPort
- x48 = SOAPServicesPort
- x49 = ODataServicesPort
- x50 = ManagementServicesPort

Business Central URLs

Validated web access:

BC25Test: <http://srvbcapp2:8080/BC25Test/?company=SCANPAN%20Danmark&dc=0>

Validated service URL:

BC25TestUserPwd SOAP/WS: <http://srvbcapp2:7348/BC25TestUserPwd/WS/>

Business Central URLs (continued)

Inferred web URLs from instance names:

BC250: <http://srvbcapp2:8080/BC250/?company=SCANPAN%20Danmark&dc=0>

BC25UserPassword: <http://srvbcapp2:8080/BC25UserPassword/?company=SCANPAN%20Danmark&dc=0>

BC25TestUserPwd: <http://srvbcapp2:8080/BC25TestUserPwd/?company=SCANPAN%20Danmark&dc=0>

Inferred SOAP/WS URLs from the validated port pattern:

BC250: <http://srvbcapp2:7047/BC250/WS/>

BC25UserPassword: <http://srvbcapp2:7148/BC25UserPassword/WS/>

BC25Test: <http://srvbcapp2:7248/BC25Test/WS/>

BC25TestUserPwd: <http://srvbcapp2:7348/BC25TestUserPwd/WS/>

Notes

BC25Test PublicWebBaseUrl -> <http://SRVBCAPP2:8080/BC25Test/WebClient/>

BC25TestUserPwd returned the same PublicWebBaseUrl, which looks inconsistent.

Treat the inferred BC25TestUserPwd web URL as unvalidated until opened successfully.

Original conflict: BC250 and BC25UserPassword both used DeveloperServicesPort 7049.

BC25UserPassword was corrected to DeveloperServicesPort 7146.
